

Draft agenda:

We at Laya, Samuchit Envirotech and INECC believe that science, technology and green ventures based in India started by young entrepreneurs have the potential to create innovative market-based solutions to some of our greatest challenges. We also believe that these ventures can generate significant triple bottom line return by creating social impact, becoming financially sustainable and by promoting environmental responsibility.

We invite you to join us for a day long roundtable on **February 16th 2017 @BAIF, Pune from 9:00am - 5:00pm** to explore the unique areas where entrepreneurs who are promoting environmental responsibility could come together to better understand innovative methods of supporting and scaling green innovations and to explore opportunities to better support the needs of young green entrepreneurs.

The roundtable workshop aims to cover:

- Introduction to climate change and sustainable development in the Indian context
- Provide hands on experience for confidence building of prospective young entrepreneurs
- Exposure and discussion on different technologies and green ventures
- Networking
- Sharing case studies, success and challenges stories
- Discussing project possibilities
- This roundtable can be a first introduction of setting direction for future long term engagement

Should you be interested in participating in this roundtable workshop, kindly register yourself [here](#) before the 5th of February 2017.
